

Application No. 10/815,941
Amendment dated November 30, 2006
Reply to Office Action of August 30, 2006

Docket No.: 42989-199768

AMENDMENTS TO THE CLAIMS

A listing of the claims follows, in which claim 14 is currently amended:

1. (Previously Presented): A method of trimming hair from a body, comprising:
 - facing a first mirror;
 - placing a hair trimming device, having at least one second mirror attached thereto, in a position to observe in said first mirror the reflection from said second mirror; and
 - manipulating the hair trimming device to remove hair from portions of the body visible in said first mirror as a reflection in said second mirror.
2. (Previously Presented): The method of claim 1, including the further step of attaching said second mirror to said hair trimming device.
3. Previously Presented): The method of claim 2, wherein the second mirror is arranged to extend beyond the hair trimming device laterally with respect to said body.
4. (Previously Presented): The method of claim 1, wherein the body has a side and the second mirror is arranged to extend laterally beyond said side of the body.
5. (Previously Presented): A method of trimming hair from a rearward facing area of a body, comprising:
 - facing a first mirror;
 - placing a hair trimming device, having at least one second mirror attached thereto, in a position to observe in said first mirror the reflection from said second mirror; and

Application No. 10/815,941
Amendment dated November 30, 2006
Reply to Office Action of August 30, 2006

Docket No.: 42989-199768

applying the hair trimming device to hair on the rearward facing area of the body such that the rearward facing area is visible in said first mirror as a reflection in said second mirror, wherein the body has first and second rearward facing areas from which hair is to be trimmed, the first rearward facing area being adjacent a first side of the body, the second rearward facing area being adjacent a second side of the body, and the second side of the body being opposite to the first side of the body, and

wherein the second mirror is arranged to extend approximately laterally relative to the first side of the body when the hair trimming device is applied to the first rearward facing area, and the second mirror is moved relative to the hair trimming device to extend laterally beyond the second side of the body when the hair trimming device is applied to the second rearward facing area.

6. (Cancelled).

7. (Previously Presented): The method of claim 5, further comprising magnifying, by means of the second mirror, the image of the rearward facing areas from which hair is to be trimmed.

8. (Previously Presented): Apparatus for trimming hair from a rearward facing area of a body, comprising:

a hair trimming device; and

a mirror coupled to the hair trimming device, the mirror having a first position in which the mirror extends laterally relative to a first side of the hair trimming device, and a second position in which the mirror extends laterally relative to a second side of the hair trimming device, the second side being opposite to the first side.

Docket No.: 42989-199768

9. (Previously Presented): The apparatus of claim 8, including a structure that releasably retains the mirror in the first and second positions.

10. (Previously Presented): The apparatus of claim 8, wherein the hair trimming device has a hair trimming element facing in a first direction, and the mirror faces generally in said first direction.

11. (Previously Presented): The apparatus of claim 8, wherein the mirror is a magnifying mirror.

12. (Previously Presented): Apparatus for trimming hair from a rearward facing area of a body, comprising:

a hair trimming device;

a mirror; and

a structure connecting the hair trimming device and the mirror.

13. (Previously Presented): The apparatus of claim 12, wherein the hair trimming device has a hair trimming element facing in a first direction, and the mirror faces generally in said first direction.

14. (Currently Amended): A mirror device comprising:

a mirror;

an attachment structure adapted to attach the mirror to an elongated element, the attachment structure having first and second opposite sides; and

Docket No.: 42989-199768

a member coupling the mirror to the attachment structure, the member having a first position in which the mirror extends beyond the first side of the attachment structure, and a second position in which the mirror extends beyond the second side of the attachment structure, the member having a structure releasably retaining the connector in its first and second positions.

15. (Previously Presented): The method of claim 1, wherein the second mirror is a magnifying mirror.

16. (Previously Presented): The apparatus of claim 12, wherein the mirror is a magnifying mirror.

17. (Previously Presented): The mirror device of claim 14, wherein the mirror is a magnifying mirror.
